

How a Bestly In-House Cloud deal moves from a website visit to a live private cloud, and where the customer sees what.

Quick reference

Stage	Customer-visible step	What the customer fills out / signs
1	Lead	/get-started form (5 fields, public)
2	Brief	/brief/:token (pre-discovery context)
3	Discovery	30-min call (Bestly Cloud Talk)
4	SOW + deposit	Libresign envelope + Stripe checkout
5	Tech intake	/intake/:token (deep 5-stage form — IT lead)
6	Provisioning	Status page auto-updates
7	Install	Acceptance signature (Libresign)
8	Live	Self-serve dashboard at cloud.<their-domain>

The eight stages in detail

1

Lead

WHO: Anyone who lands on the site

- Customer fills the public form at **/get-started**: contact, company, user count, primary pain, urgency.
- Backend writes a row into `cloud_leads` + a shell `cloud_briefs` with a per-deal token.
- Customer receives a branded autoresponder. Operator gets an ntfy push.

2

Brief

WHO: The same customer, reading their email

- Operator (or auto-trigger) emails the customer a link to **/brief/:token** — a longer pre-discovery questionnaire.
- Customer fills it out at their pace. Auto-saves every 30s.
- On submit: ntfy + brief-submitted email back to customer.

3

Discovery call

WHO: Bestly + customer, on Bestly Cloud Talk

- 30-minute call. Operator pulls answers from Stage 2 into a one-page Discovery Brief PDF (auto-generated).
- Side-by-side cost comparison: current IT spend vs. Bestly Cloud.
- Zero pressure — customer leaves with the PDF whether they move forward or not.

4

SOW + deposit

WHO: Customer signs + pays (~25% of total)

- Operator generates the SOW via Libresign — customer signs in-browser.
- Operator generates a Stripe payment link for the deposit.
- Customer pays. Stripe sends a `checkout.session.completed` webhook.

GATE: *This is where the customer becomes a customer. Real money changes hands.*

■■■■■ AUTOMATED ■ no operator action ■■■■■

5

Technical intake

WHO: Customer's IT lead

- On deposit webhook, the deal auto-advances to Stage 5 and a **Deposit received** email goes out with a unique link to **/intake/:token**.
- 5 stages: network/DNS, branding, users + groups, migration sources, compliance + backup posture.
- Auto-saves every 30s; same token used for the live status view after.

GATE: Customer only ever sees this URL after Stage 4. Filters tire-kickers.

6

Provisioning

WHO: Bestly engineering — customer watches

- Operator works an 8-step checklist: hardware-procured → os-imaged → services-configured → branding-applied → users-created → migration-queued → test-deploy → certs.
- Customer's status page (same /intake/:token URL) auto-refreshes every 60s and shows progress.
- All-checked unlocks **Ship it** → advance to Stage 7.

7

Install

WHO: Customer receives + signs acceptance

- Hardware ships. Tracking number + ETA on the customer's status page.
- Install scheduled (remote or on-site). After install passes the acceptance checklist, customer signs the Acceptance envelope (Libresign).
- Acceptance signed → **Mark live** unlocks → advance to Stage 8.

8

Live

WHO: Customer is using their cloud

- Customer's team logs in at **cloud.<their-domain>**.
- 30-day check-in (operator) · quarterly · Y1 / Y2 / Y3 renewal milestones · churn-risk pill + health notes on the operator side.
- Customer's status page becomes their self-serve dashboard.

What's intentionally NOT customer-visible

These exist for the operator and never show in customer flows:

/admin/cloud	Kanban of every deal across all 8 stages.
/admin/cloud/<id>	Full deal detail with notes, events, dialogs.
/admin/cloud/<id>/brief-pdf	Discovery Brief PDF generator.
/admin/shield-reports	Operator review queue for URL allowlist requests.
Supabase event log	Audit trail of every stage transition + email + ntfy.

Operator checklist (when each stage transitions)

Trigger	Operator must do
New lead (Stage 1)	Ntfy push fires. Review form. Email Stage 2 brief link.
Brief submitted (Stage 2)	Ntfy push fires. Schedule the discovery call.
Discovery call completed	Generate Discovery Brief PDF. Send it. Move to Stage 4.
Stage 4 prep	Generate Libresign SOW + Stripe payment link from deal detail.
Deposit paid (Stage 4 → 5)	Nothing. Webhook auto-advances + emails intake URL.
Intake submitted (Stage 5 → 6)	Review answers. Order hardware. Start the 8-step checklist.

Provisioning done (Stage 6 → 7)	Ship the box. Update tracking on the deal.
Acceptance signed (Stage 7 → 8)	Mark live. Webhook stamps go_live_at + customer celebration.
Stage 8 milestones	30-day check-in. Quarterly review. Y1/Y2/Y3 renewal nudges.
